SUMMARY

Results-driven Full Stack Software Engineer with 5+ years of experience building scalable backend systems and production-grade web applications. Skilled in designing and developing RESTful APIs, multi-tenant platforms, database optimization, cloud infrastructure, and on-premises systems. Adept at translating complex business requirements into scalable software solutions and driving projects from design to deployment. Committed to delivering clean, maintainable, and secure solutions while collaborating effectively with cross-functional teams to drive business success and engineering excellence.

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript, PHP, C, C++ (OOP)

Backend Development: NestJS, Express.js, Node.js, Laravel, RESTful APIs

Frontend Development: React.js, Tailwind CSS, Bootstrap

Databases & Caching: MySQL, PostgreSQL, MongoDB, Redis

Cloud & BaaS & DevOps: Git, Docker, CI/CD, Bash Scripting, AWS (basic proficiency), Supabase, Firebase

Architecture & Design: Multi-Tenant SaaS, Role-Based Access Control (RBAC), Scalable System Design, Modular Architecture

Third-Party Integrations: Stripe, Twilio, Firebase, SSLCommerz, bKash, SurjoPay, SonaliPay, Resend, Algolia, Sentry

AI-Assisted Development: Claude Code, ChatGPT, GitHub Copilot

EXPERIENCE

Cloudly Infotech Ltd.

Software Engineer

February 2022 – Present

H#429, R#30, Mohakhali DOHS, Dhaka

- Designed and developed high-performance RESTful APIs for a multi-tenant SaaS platform supporting member registration, subscription management, event coordination, fundraising, job postings, and live streaming.
- Built and maintained billing features and bulk data processing pipelines for large-scale operations.
- Developed scalable backend architectures with authentication, authorization, and role-based access control (RBAC).
- Managed containerized cloud infrastructure using Docker, Kubernetes, CI/CD pipelines, and AWS services.
- Integrated third-party services including Stripe, Twilio, SSLCommerz, Resend, and Firebase for payments, messaging, and notifications.
- Implemented logging, monitoring, and activity tracking using centralized log aggregation tools (Dozzle).
- Designed database schemas and optimized queries for performance, scalability, and high-traffic workloads.
- Applied caching strategies and performance tuning techniques to improve system efficiency.
- Ensured clean, maintainable, and scalable code following best practices and modular architecture principles.
- Leveraged AI-assisted development tools (Claude Code) to improve productivity and accelerate development workflows.

Logic Infotech Ltd.

Junior Software Engineer

September 2020 – February 2022

H#85, R#4, B#B, Banani, Dhaka

- Built a scalable LAN-based healthcare system connecting multiple hospitals via a centralized server to support continuous clinical operations.
- Developed core clinical modules including patient registration, doctor scheduling, prescriptions, pharmacy management, payment processing, and diagnostics.
- Integrated pathology and radiology equipment to automate diagnostic report generation and improve operational efficiency.
- Designed and developed secure RESTful APIs for cross-organization document sharing between BKMEA and BSW with structured approval workflows.
- Implemented modules for member registration, machinery tracking, fire certificate management, attachments, payments, and reporting.
- Integrated payment gateways including SonaliPay and SSLCommerz for secure transaction processing.
- Implemented error monitoring and logging using Laravel Log Channels to improve system reliability and debugging.

EDUCATION

B.Sc. in Computer Science & Engineering

2016 – 2020

Pabna University of Science & Technology, Pabna, Bangladesh

CGPA: 3.61 / 4.00

PUBLICATION

Hybrid Feature Vector Space-Based Ensemble Machine Learning Approach for Sentiment Analysis

IEEE International Conference on Computer and Information Technology (ICCIT), Bangladesh, 2021

★ Dr. Fatema Rashid Best Paper Award, 2021

LANGUAGES

Bengali — Native **English** — Professional Working Proficiency

PROJECTS

- **Instacircle** — Multi-Tenant Community Management SaaS Platform ***

A multi-tenant SaaS platform with web and mobile application support for member registration, member directory, subscriptions, event management, fundraising, job postings, live streaming, activity gallery, notices, polls, forum posts, and subscription-based access control. It also includes dynamic member onboarding forms, notifications (SMS, email, bell, push), activity logs, and news feeds.

Responsibilities: Designed and developed scalable RESTful APIs and billing workflows for high-traffic multi-tenant operations. Designed and maintained data processing pipelines and managed cloud infrastructure using Docker, Kubernetes, CI/CD pipelines, and AWS services. Integrated multiple third-party services for payments, messaging, and notifications, and implemented system monitoring and logging.

Tech Stack: NestJS, Next.js, React Native, PostgreSQL, Redis, React, TypeScript, Tailwind CSS, AWS (S3, SQS, Lambda, DynamoDB), Docker, CI/CD, Kubernetes, Jenkins, Firebase

- **oCare** — Healthcare Mobile & Web Application for Doctors, Chemists, and Patients ***

A mobile and web-based healthcare platform enabling interaction between doctors, patients, and chemists for appointments, prescriptions, and medicine management.

Responsibilities: Developed RESTful APIs and an admin panel using Laravel. Implemented role-based access control for patients, doctors, and chemists. Built features including doctor registration, appointment scheduling, prescription upload, medicine intake alerts, follow-up reminders, and medicine store management. Also implemented image compression for uploaded prescriptions to optimize storage and performance.

Tech Stack: Laravel, React Native, PostgreSQL, Redis, JavaScript, Firebase, jQuery, Tailwind CSS, AWS (EC2, RDS, S3)

- **JEXCA — Alumni Management System**

An alumni management platform supporting member registration, event management, e-voting, help-seeking posts, subscription packages, and billing workflows.

Responsibilities: Built core system features including user registration, events, e-voting, subscriptions, and full billing workflows. Implemented granular role-based access control and deployed the system on AWS infrastructure. Integrated multiple payment, messaging, and notification services and ensured system monitoring.

Tech Stack: Laravel, MySQL, Redis, JavaScript, jQuery, Bootstrap, AWS (EC2, RDS, S3)

- **Laneway — Education Management System**

An education management platform supporting student registration, course management, session-wise enrollment, billing, and document management.

Responsibilities: Developed core academic modules including student registration, course handling, enrollment workflows, billing, and document management. Managed the system on AWS infrastructure and ensured application monitoring and stability.

Tech Stack: Laravel, MySQL, JavaScript, jQuery, Bootstrap, AWS (EC2, RDS, S3)

- **Hospital Management System — Multi-Site Healthcare Platform *****

A LAN-based healthcare platform connecting multiple hospitals through a centralized server to support continuous clinical operations and integrated pathology and radiology equipment to automate diagnostic report generation.

Responsibilities: Developed core hospital modules including patient registration, doctor scheduling, prescriptions, pharmacy management, payment collection, and diagnostics.

Tech Stack: Laravel, Oracle, JavaScript, jQuery, Bootstrap

- **Bangladesh Lions Foundation Website — Healthcare Platform Site**

A healthcare website providing patient appointment booking, doctor scheduling, specialty-based doctor search, and medical information services.

Responsibilities: Built core patient-facing features including appointment booking, doctor scheduling, and search functionality for medical services.

Tech Stack: Laravel, MySQL, JavaScript, jQuery, Bootstrap

- **BKMEA — Document Management & Compliance Platform**

A compliance and document management platform supporting member registration, machinery and fire certificate tracking, attachment management, payment processing, reporting, and secure cross-organization document sharing.

Responsibilities: Developed core modules and secure RESTful APIs for document exchange between BKMEA and BSW with structured approval workflows. Integrated SonaliPay and SSLCommerz and implemented application monitoring using Laravel Log Channels.

Tech Stack: Laravel, MySQL, JavaScript, jQuery, Bootstrap, Firebase

- **BTI SFS — Real Estate Process Automation**

A real estate process automation platform supporting project onboarding, design consultancy workflows (2D, 3D, WD), payment collection, design documentation, reporting, and real-time notifications.

Responsibilities: Designed and developed scalable RESTful APIs, implemented consultancy-wise payment and reporting modules, and built a real-time notification system using Firebase.

Tech Stack: Laravel, MySQL, React, TypeScript, Tailwind CSS, Firebase

- **DMS — Document Management System**

A secure document management platform supporting file and folder creation, permission-based sharing, file synchronization, and role-based access control on on-premises infrastructure.

Responsibilities: Developed core file management and access control features ensuring secure and structured document workflows.

Tech Stack: Laravel, MySQL, Vue.js, Vuex, Vue Router, Bootstrap

- **Shadibari — Matrimonial Web Platform**

A matrimonial web platform supporting biodata registration, matchmaking, proposal management, notification management, payment management, and package-based access control.

Responsibilities: Single-handedly implemented all of its features, admin panel, and managed on-premises server infrastructure using cPanel; monitored errors via Laravel Log Channels.

Tech Stack: Laravel, MySQL, Inertia.js, Vue.js, Tailwind CSS
